

A

Unplug network cable from netbook. Unplug power cord from outlet. Take netbook and power cord to tanker. Set netbook on mounting stand in tanker and plug power cord into inverter.

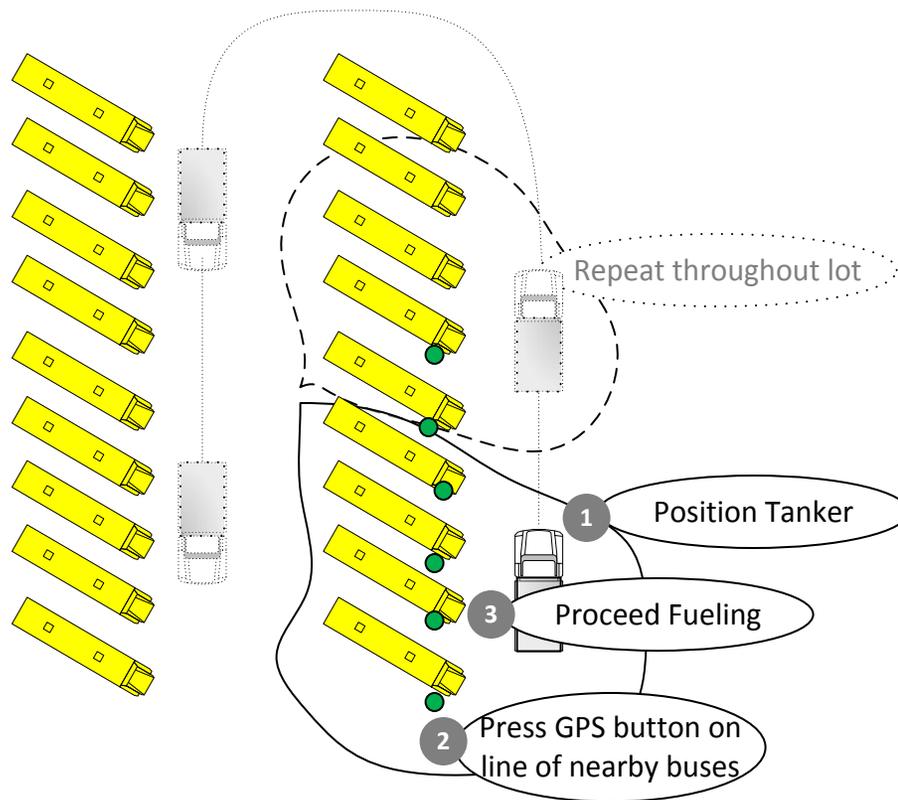

B

Mixing GPS data collection into fueling process (for traditional parking lots):

- 1) Pull tanker to a fueling position
- 2) Press the GPS button on the group of buses to be fueled from the tanker at its current position, plus the next few in line as they may upload slower with the tanker at a distance
- 3) Proceed with fueling process

Repeat throughout the lot (noting that the netbook will continue to upload data from more than just the nearest buses)

C

Unplug power cord from inverter. Take netbook and power cord to shop. Set netbook on desk/stand, plug power cord into outlet and network cable into netbook. Uploading will start automatically after network connection rebuild themselves. Close lid.
